

For gates & rails look to the leader in starting gate technology

For five decades a dynasty spanning three generations has managed to dominate its local and global market with products that set the standard for all other manufactures. In 2009 Simtrack obtained the ultimate achievement and became the largest producer of starting gates in the world!

Starting Gates: The choice is yours

With two completely different, but equally brilliant operating systems Simtrack offer their clients a choice between a more traditional design or the state of the art model.

The 'mechanical' design utilises front gate springs and suction cups, while the alternative 'hydraulic' operating system is one that stands alone for advancement in gate technology with both front and rear gates using the reliability and smoothness of hydraulics.

- **High quality stainless steel** on all front & rear gates & platforms.
- **Incomparable standard warranty** double that of virtually all other known competitors in the world market.
- **Exclusive design features** including stalls that have been designed wider, longer, & in a world first, connected to the only overhead truss in existence, completely free of dangerous internal support bars.
- **Quality and sound proofing** at a level never been seen before, its easy to see why they have become the clear choice for this equipment.

Running Rail: An inexpensive safe solution

Simtracks fixed and movable rail has provided a reliable and safe option for the racing industry, with a product that is simple to install, inexpensive, and purpose built for racecourses and private training facilities alike.

Used in more than 90% of new racing tracks in this country, this 100% UV resistant rail is engineered to last well over 25 years in all weather conditions.

The rail designs have extensive safety and design features, and with only 5 men up to 1000 meters can be installed in a single day.

Advantages of the Simtrack rail over its competitors:

- **Relocation & Installation Time:** up to twice as quick to erect.
- **Strength:** stronger than other rail alternatives.
- **Ground Fixing Safety:** no exposed pegs or fixtures.
- **Safer Joint:** overlapped joints avoid injury on damaged rail & allow for expansion.
- **Easy Attachment:** bolts are self-locking into post plate.
- **Single Post Plate:** simple design means only one plate per post.
- **Flexible Post Distance:** posts can be moved to avoid underground obstructions.
- **No Special Tools:** a single spanner is the only tool required to fix rail to post.

Simtrack is committed to supplying its local and overseas market with unmatched quality, at a more than affordable price. With the flexibility to customise its products for specific client needs, and exclusive optional extras, Simtrack can assist with every aspect of your track requirements. Backed by ongoing research and development, Simtrack is the next level in safety and performance. Simtrack – lengths ahead of the rest!
